CEA DATABASE PSQL -> SQLite Report

When transferring from postgreSQL to SQLite, we encountered the following problems:

1. Commands "CREATE SCHEMA" and "DROP SCHEMA" are not supported in SQLite.

2. Keyword "CASCADE" is not supported in SQLite, because SQLite adds them by default.

3. SQLite doesn't support "DOMAIN", so we have to use the regular "CHECK" statements.

4. SQLite doesn't allow us to create new types, statements with "CREATE TYPE" are not recognized.

5. SQLite doesn't support ENUMS neither, so we have to change it back to regular types and check them using value constraints.

Here is a copy of the shell output when we run the command:

```
sqlite3 CEA.db < CEA_db_postgre.sql
```

```
wolf:~$ sqlite3 CEA.db < scripts/CEA.sql
